

The IntesisBox portfolio includes a wide variety of gateways for the integration of Mitsubishi Electric Air Conditioners into the most popular home and building automation standard protocols.

In 2006, Intesis launched the first product able to integrate Mitsubishi Electric AC Systems into KNX that, shortly afterwards, was certified by the KNX organization. Now, after years of experience, the products from IntesisBox make it easy to meet Mitsubishi Electric integration units with the most extended standards protocols (ModBus, Bacnet and Wifi).

IBBACMIT0011000
